## Book Descriptions:

# C scope cs5mx manual

Good batteries On CS5MX only Push BATT CHECK down and hold to indicate battery condition. Good batteries will be in the green area on the meter. Release. This is particularly important in order to register for the free extended parts guarantee UK only. Please retain the original packing box. In the event that your detector should ever require to be serviced, this package will be most suitable for postal protection. BATTERY CHECK CS2MX only CS5MX only The battery condition is indicated by an A battery condition indicator is provided audio tone. With Disc 1 set at 5 to reject small iron and silver foil, commence searching. Remember the detector is a motion detector, which means that the search head needs to be constantly sweeping except in pinpoint mode see page 9. The following chart gives a few ideas of setting and the conditions under which you would employ them. This is particularly useful for pinpointing. When the BATT CHECK is pressed, the meter will indicate condition of the batteries. Frequently check the battery condition during the search. Rechargeables give little warning of failure so ensure they are fully charged prior to a long period of searching or carry a fresh set with you. See Batteries, page 4. The unit may operate with reduced sensitivity for a period after indicating flat batteries. CHARGING BATTERIES A battery charge socket is provided for use with the CScope battery charger see Accessories and is located under the protective cap in the battery housing. The smaller of the two sockets. Inserting the charger will automatically remove the power from the detector so the charger must be removed to do a battery check. The extent and thoroughness of your research will be one of the major factors in the success of your detecting. You should aim to get as complete an understanding as possible of the local history and geography. Do not leave gates open when crossing fields, and do not damage crops or frighten animals. 3. <http://www.maciejmarkiewicz.pl/uploaded/dell-xps-m1710-manual.xml>

Good batteriesYou are now in ALL METAL MOTION MODE. You will find all metals within the search head range including iron and trash. PROVIDING THE SEARCH HEAD IS MOVING OVER THE TARGET not stationary. Adjust DISC 1 top right to position 5. You are now in DISCRIMINATING MOTION MODE. The other modes require more detailed explanation acquired from reading the fullStem Connecting Nut. Cable. Lower Stem. Search Head Fastener. Pinpoint. Disc 2 Select. Discrimination 2. Signal Meter CS5MX only. Battery Check CS5MX onlyThis is particularly important in order to register for the freePlease retain the original packing box. In the event thatCScope detectors are recognised as the finest detectors available. They are designed with lastingThe only way to realise this value is toYou will then be able to obtain all theIt is also strongly recommended that you experiment withAlways remember that becoming a goodTwist the plastic stem lock, located atAdjust for length and rotate theAllowing enough cable forTurn the stemIt is advisable to use standardYou can then evaluate the sort of use you give the detector and decideBattery.

CompartmentThen loosen the twoLift out the holder and detach the connector if it is alreadyRoll each individual battery to ensure it is located correctlyReplace the connector making sure that it is firm and well seated, andFit the cover and tighten the two captive screws fingerNote Zinc Carbon batteries should not be left in the detector for long periods where they couldCS5MX only. The battery condition is indicated by anA battery condition indicator is providedBATT CHECK and hold down. The meterSENSITIVITY control off. RechargeableA loud, clear and sharp signal indicates theA weak, broken or nonexistent signalPush SwitchDisc 2. Disc 2 push select buttonBoost CS5MX only. Battery Check CS5MX onlyThis is a silent operating detector and you should rotate the Sensitivity

Control Operate the Sensitivity at the highest level possible but, if you experience Turned clockwise it becomes a fully variable discrimination control. Discrimination is a means of ignoring objects which are generally regarded as junk At the lowest setting most iron objects are ignored. Increase the setting and the At higher levels still, ring pulls will be ignored. You must, however, realise that at With Disc 1 set at 5 to reject small iron and silver foil, commence searching. Remember the detector is a motion detector, which means that the search head needs You now need to set Disc 2 to ignore ring pulls. Sweep the head above a ring pull and rotate Disc 2, at the same time depressing the. Disc 2 push select button with the thumb of the hand holding the metal detector. When the ring pull signal disappears this control is set. Release the push button. Your detector automatically operates in Disc 1 so commence searching see. When you receive a signal, this indicates that the target could be a silver hammered. Depress Disc 2 button and hold it. Sweep the target object again.

<http://www.drupalitalia.org/node/78432>

If you are still Disc 2 gives you greater analytical skills than a single discrimination metal detector Three points to remember Although Disc 1 and 2 are set to ignore metals at the same position there may Practice, in air, with various metal objects so you understand the detector The following chart gives a few ideas of When held down, the pinpoint button enables the detector to give a varying response To pinpoint a target carry out the following procedure Hold the pinpoint button down and return the head to the target area; move it The all metal pinpointing mode gives a positive response to all metals irrespective of It is not necessary to sweep the target as the pinpoint mode will respond even when Normal and Pinpoint Response This is particularly useful for pinpointing. When the BATT CHECK is pressed, the meter will indicate condition of the batteries. If the meter reading falls below the green band, the batteries should be replaced. When increased sensitivity to deep objects is required, then the setting HI should be NORMAL setting. Frequently check the battery Rechargeables give little warning of failure so ensure they are fully The unit may operate with reduced sensitivity for a period after indicating flat batteries. However the batteries should be replaced or recharged at the first opportunity. Use headphones when possible. Not only do they extend battery life, but they also cut out Large pieces of iron are difficult to An aid to determine whether the target is iron or not is to PINPOINT button. Iron objects will generally give a stronger more positive signal than good When operating on the beach the all metal mode may give a response to the beach itself. If this is If in doubt as to whether the target is good or not we always recommend that you should dig it The best ground conditions are well In these conditions detection range will be. N.B.

### IDEAL SCOPE MOUNTING SYSTEM

Extremely sturdy one-piece scopemount, with possibility to attach multiple optical accessories directly to the mount. Built-in level. 45 degree split of the rings gives better view of the turrets. Straight and tilted mounts available.

**Material**

- Mount ..... 7075 T651
- Finish ..... Scaled Hard-coated finish.
- Level ..... Clear level made of plastic.
- Screws ..... Metric sizes.
- M4 in rings and interfaces and M5 in bases.

**Interfaces:**

- Ampoint T1, Burris Fastfire, Trijicon RMR,
- Docter and Leupold Deluapoint.
- Picatinny, various lengths and heights
- Tri-rail for Scope IR
- Spacers

**Notes on mounting**

The rings are machined with circular grooves that could be used for gluing the scope. Gluing is a good solution when the gun and the scope is used extensively in 4WD vehicles and in other applications with severe vibrations. For normal use (including mostly military, law enforcement and civilian use) we strongly recommend the use of small amount of wax between the

scope and the rings (available from Midway). **Wax is a very good gripping agent that prevents slipping.** It is also very easy to remove with some alcohol when it's not desired any more. Ring screws are delivered waxed. **Caution: working in extreme conditions might want to degrease the screws and screw holes to locate innards.**

Your metal detector is a top performance deep seeker but adverse soil conditions canThis technique is learned from careful analysis of theEach time a signal is heard, listen for anyAfter digging up the object, compare the object size,After careful analysis of many signals you will learn to read the hidden target before digging.Headphones. Lastmanuals provides you a fast and easy access to the user manual CSCOPE CS5MX. We hope that this CSCOPE CS5MX user guide will be useful to you. Assemble and adjust for length Twist surplus lead around stem. On CS5MX onlyPush BATT CHECK down and hold to indicate battery condition. On CS5MX onlySet BOOST to NORMAL. If the meter reading falls below the green band, the batteries should be replaced. When increased sensitivity to deep objects is required, then the setting HI should be used. However, if false signalling occurs due to soil mineralisation, revert to the NORMAL setting. Rechargeables give little warning of failure so ensure they are fully charged prior to a long period of searching or carry a fresh set with you. The unit may operate with reduced sensitivity for a period after indicating flat batteries. Not only do they extend battery life, but they also cut out extraneous noise. It is instructive to bury some objects in a clear patch of soil and note the response when swept at different rates with DISCRIMINATE at various levels. Large pieces of iron are difficult to ignore and may give confusing signals. An aid to determine whether the target is iron or not is to go into an all metal mode either by turning the DISCRIMINATE off or simply pressing the PINPOINT button. Iron objects will generally give a stronger more positive signal than good objects. Rechargeable battery pack A shrink wrapped pack of 8 rechargeable nicad batteries to replace the standard batteries and holder. Battery charger The CScope battery charger is designed to charge the rechargeable pack quickly and safely. It will take between eight and fifteen hours to fully recharge flat batteries with the CScope charging unit. For further information, and a price list, for all CScope accessories please telephone 01233 629181. Time spent researching to locate a worthwhile site for a search can be time wasted if your search is hasty and erratic.

Remember it is illegal for anyone to use a metal detector on a scheduled ancient monument unless permission has been obtained from the Historic Buildings and Ancient Monument Commission for England or the Secretary of State for the Environment in Scotland and Wales. You can look at the CSCOPE CS5MX forum to identify problems that users have come across and the suggested solutions. Its users find it very efficient., Moreover, most of them share the same opinion They find that it is very cheap You can download the CSCOPE CS5MX user manual to ensure that its features correspond to your needs. If in doubt as to whether the target is good or not we always recommend that you should dig it up. Your knowledge of how the detector responds will increase each time and soon make you more sure. The best ground conditions are well compacted soils and coins can be found at the greatest depth if the object has been buried for some time and the coin has interacted with the salts in the ground, thereby appearing larger to the detector. The worst

conditions for detecting are on loosely compacted or freshly dug ground or when the object has only recently been buried. Your metal detector is a top performance deep seeker but adverse soil conditions can significantly reduce the depth of detection. This technique is learned from careful analysis of the meter and audio signal coming from the detector. Each time a signal is heard, listen for any peculiar characteristics it may have, determine over how large an area you get a detector signal, and try to outline the object before you dig. After digging up the object, compare the object size, shape, depth and position in the ground with signal information you received before digging. After careful analysis of many signals you will learn to read the hidden target before digging. 10The reviews rough results are presented in the following graph 0 1 2 3 4 5 6 7 8 9 10 By leaving the mouse on a column for a few seconds, you can see the number of people who voted to make up the score that appears in the horizontal axis.
