To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyses reviews to verify trustworthiness. Please try again later. S. wilson 2.0 out of 5 stars VERY annoying!! As previous reviewers have indicated, the instructions are absolutely tiny. I ended up having to ask a friend for help and he increased the size of the font and printed the instructions out on a larger piece of paper. I have another digital timer which I programmed successfully, but this one was beyond me. <http://kardelendalgicpompa.com/uploadfiles/elements-of-dynamic-optimization-solution-manual.xml>

Once that was corrected, it worked correctly. One advantage I found was that the plug is very narrow, so if you want to use it on a 4 gang adapter, you have no difficulty using the next plug point along. I would not buy this item again. It didn't fit my plug I bought this timer to turn the lights off and on for my fish tank. I'm 45 and wear glasses and could easily see the small print, no problems setting timing up. I use it in my greenhouse and working great on in the morning and off later at night. I have no idea why people are finding this product hard to read or set up. Easy as, great product and price point would highly recommend and will buy again if I need another one in the future. Not really suitable if you want an ad hoc timer for a slow cooker or something similar as a bit of a faff to set for one event. Hard to set up at first go, managed eventually. Easy to programme, works very well. They're great. Bit complicated, but that's a result of all the flexibility you have when setting them up different times for different days etc. Much better than the other analogue sort no ticking noise! To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. It also analyses reviews to verify trustworthiness. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. EN 60730. By following the guidance below you can help us to help you when a product is not what you expected, or is faulty. Your statutory rights are not affected by this guidance. So much better than the analog timers with the noisy timers. Good price on Screwfix and received it within 2 day of ordering Which can be very useful, as well as being a safety feature to prevent over charging electrical electronic devices. Would recommend this product. Following the steps is not easy and does not reflect exactly what appears on the screen. What should take a few minutes drifted into an hour in order to get the right sequence of buttons clicked. So all a bit hit and miss which is a frustration; now it's in place and working fine. Nice compact switch.

Gave reliability a rating 3 as I have only had it 1 day and therefore do not know This one however does work with no problems. It is a bit fiddly to set up but they all are, once set works perfectly. Make sure you read the instructions fully and familiarise yourself with them. I used mine to switch outside lights on and off at set times without a hiccup. Registration is free and can be cancelled at any time. From the manufacturer's printed instruction manual. Woods Timers Help Line For further questions about Woods Digital Timers contact them directly at 8005614321. Woods 50015 Instructions Charge the Battery Plug the timer into wall outlet for 10 minutes to charge internal battery. Note You can then unplug the timer from the wall outlet and comfortably hold it in your hand to program the timer. Clear the Memory Press the R button with a toothpick to erase any previous settings. To Set the Current Time Press and hold the CLOCK button. At the same time, press the HOUR and MINUTE button as many times as necessary to advance the display to the correct time. Even so, I thought the price was very reasonable considering that I was paying for a device, which can be programmed to do so much more. Anyway, it is very easy to setup, if you carefully follow the instructions. A word of warning though, both the LCD display and printed instructions will prove difficult to read by those like me with an old man's impaired vision. I reached for my magnifying glass straight away. This is my only reason for marking down features. Otherwise, I am more than satisfied. Probably more possible adjustments than most will ever need. However It needs a back light. The display is too dull to see clearly. Seems well made and robust. My only neg comment would be the display is small and hard to see the icons displayed on it I have to use a magnifying glass But then I am in my 60s and need reading glasses. Apart from maybe an upgraded version with bigger display icons and maybe back lite display its a great value timer. Can it do this within the 10 settings rYes, that is entirely possible just make sure that every day is showing at the top of each of the ON and OFF timer programs. Please note that you will need to be setting the first backon time with the second off time etc. You could use the Count Down function for that, as it will only do what it is programmed to once for each press of the CD button which initiates that specific program. By pressing the MANUAL button repeatedly you can switch between the available operating modes on, auto or off outside of what the timer programs would normally be doing. After manually selecting ON or OFF mode pressing the button an additional time will return the timer to AUTO mode so that it will continue to perform future program actions. Yes, 1 minutes is the minimum timer duration. For a better experience, please enable JavaScript in your browser before proceeding. It may not display this or other websites correctly. You should upgrade or use an alternative browser.

Due to Daylight saving I tried to reprogram it without instructions, and now havent got a clue what its doing. Has anyone got instructions for this. If so could they take a photo of them and post it for me please. When you have it right, press the SET button again to move on to minutes and again for the day etc. When you get to the end of the cycle it will show the correct time and date. When you have it right, press the SET button again to move on to minutes and again for the day etc. When you get to the end of the cycle it will show the correct time and date. Thats great, now I can have my electric blanket on and I must say it will be very appreciated tonight. Its absolutely freezing here. Youre a star. In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Please try your search again later. Programs can be set for each day of the week, once a week, or only on selected days during the week. Equipped with a 3wire grounded outlet, the timer delivers simple automation for indoor lighting, small electronics and appliances. It lets you add lamps, floor fans, routers, Christmas lights, and any number of other devices to you wall outlets, and set a weekly schedule that automatically turns them on and off at your convenience. Want to turn lights on before you get home. It can do that. Want it to shut off your crock pot in the kitchen. It can do that, too. With this timer, you can even save on your energy bill by automatically turning off your idle appliances. It's perfect for turning lamps on and off in bedrooms, living rooms or other areas where foot traffic is common. This feature gives an impression that the house is occupied while you're on business or vacation and helps to deter burglars and breakins for added safety.

You can comfortably hold it in your hand to set the timer without needing to plug it in. The manual override switch helps you conveniently turn the timer on and off manually before or after the programmed time if your schedule changes without messing up your set schedule. For the sake of safety, do not exceed the maximum load current of 15A approximately 1800w. Always check the electrical power before use to avoid potential damage to the device. To calculate the overall star

rating and percentage breakdown by star, we don't use a simple average. It also analyzes reviews to verify trustworthiness. Please try again later. HSM 5.0 out of 5 stars I couldn't be happier. They can be a little tricky to set but don't give up. I've found that, if it doesn't work right at first, it was something I did wrong, so try again. I have put these all through my house and can now have real peace of mind while I'm away. One timer gave out after a few months but I emailed the company and a free replacement was sent to me immediately. They have great customer service. Update The replacement timer I received started to malfunction after only one month of use. I had a lamp plugged into the timer and a program set correctly but the lamp never turned off. I reset the timer but nothing changed. Even when I manually pressed the "Off" button, the lamp still stayed on. I use these timers a lot and have always been pleased with them but, I guess this time, I got a couple of duds. The company reached out to me offering a replacement unit free of charge. There are companies that will just shrug off a customer problem without taking any action. Enover is not one of those companies. Great to see such dedication to having satisfied customers. I also unplugged them for an hour or so. I set them to come on for short times three times a day with a lamp plugged into them so that I would see them come on. They worked perfect. I also unplugged them for an hour or so to make sure that they kept the correct time.

I am very computer and electronics capable and I will add that it took me some time to figure out how to program these timers. Now that I am OK with programming them, I love them. I especially like the ability to set up multiple times so it appears that someone is home. From the first week, one timer's display was inconsistent—some parts of numbers did not display unless one pushed on the case the right way. It worked, so I programmed it and that was that. The other timer died after approximately nine months. I guess its gestation period was over and it advanced toward higher outlet timer nirvana. Perhaps at this moment it is timing traffic lights somewhere. Probably poorly. The second timer with the faulty display westered this very evening. I was both literally and figuratively in the dark until I plugged in another timer that I had lying around. It is interesting how the same basic timer can be sold with several different name brands and seem to work well for some and not so well for others. I suppose that I am only partially enlightened then. Since I only needed one at the time, I didn't worry about it. The second one worked great until I moved it from one outlet to another. Really. I unplugged the lamp. I tried resetting, reprogramming, unplugging, etc. The program would still show up but it didn't work. Now the screen is blank. From the reviews, it sounds like I'm not the only one with issues. I'm glad things worked for some people but I'll never buy another one of these. I think they're great. And they do exactly what they say they will. They even have battery backup, in case of power failure, so they'll kick on again a day after the power goes on. You can also program them when not plugged in, because they run on the internal rechargeable battery. Very nice. It has 10 timers, and a randomize function if you want some start times to be randomized up or down a half hour each day. Great feature. I tested it out it works flawlessly, and the display is well laid out.

Not a huge deal. 2. When setting a timer, the button that chooses the day you want the timer assigned to is labeled Week. Counterintuitive. I was tired once and was looking for the Day button. Still, they got it wrong. 3. When you program the STOP time for a timer, you have to REenter the day you want it assigned to. That's counter intuitive. i.e., you start by choosing a day for a timer. Then assign the hour and minute of the start time. Next, you program stop time. NO YOU DONT ! You actually have to pick the day AGAIN, for the stop time, and then enter hour and minute that you want the light turned off. What if you neglect to assign a day to the stop time. And you may not be home to notice that. This time is great, but your best bet is to enter all data, then cycle through the timers to make sure you got it how you want it. They are perfect for when you go on vacation or if you have an out late schedule. The amount of programmable space on the device is perfect, you just have to make sure it is set on the correct auto timer for your desired on off effect. I'll be getting more of these for other lights and devices in my house. Great purchase for the money and convenience. So

if you set the lights to go on at 5 PM when it is dark in the winter, it does not work per the user manual. No idea why anyone would design a device this way, but it is useless to me. They worked okay for the first year but more complex than they should be to setup but we managed. Year 2 all of them did not work. They had a battery inside them, it's not rechargeable and it won't work without it. There's also no way to change the battery when it's dead. There are non-standard triangular holes in the back so can't open it all. Just really terrible. Sorry, we failed to record your vote. Please try again. Also the green power light indicates when power is on and goes out when off times are reached or when the timer is set to off manually.
